

Post-Marketing Adverse Event: Severe Dizziness and Palpitations Following First-Dose SynthoCardio

Catherine Bell, PharmD; Arthur Pendelton, MD; Clinical Pharmacology Dept, United States

ABSTRACT

We present a case of severe dizziness and palpitations in a 61-year-old female after taking oral SynthoCardio 10mg. Clinical monitoring documented rapid symptom onset and subsequent resolution.

CASE PRESENTATION

A 61-year-old female patient (Weight: 63 kg) received oral SynthoCardio 10mg for mild hypertension on 18 Aug 2026. Within 90 minutes, she experienced sudden severe dizziness and palpitations. Blood pressure decreased to 92/58 mmHg. SynthoCardio was discontinued. Outcome: Resolved within 6 hours. Reporter: Dr. Bell, Clinical Pharmacologist.

DISCUSSION

First-dose hemodynamic responses require proactive patient counseling and pharmacovigilance surveillance.
